Roseda Farm

If you don't sell your cattle by the pound, most likely your customers do. At Roseda Farm, we buy and sell cattle and beef by the pound every day to support our branded beef program. Our genetics are required to perform up and down our vertically coordinated supply chain from the cow/calf producer to the consumer.

D118 represents the genetic package that works well for our program. Is she terminal? Yes. She is in the top 1% for YW, \$B and \$G which our feedlots and packing plant will appreciate. She's top 1% for marbling so our retail clients and ultimately, the consumer will appreciate the inherent high-quality beef.

But what about maternal? D118 ranks in the top 1% for WW and \$W so her genetics will reward our cow/calf producers with heavy weaning weights. She's in the top 30% for Milk so her daughters will work as replacements. All this comes in a low birth weight, easing calving package, ranking in the top 10% for CED. Powell Angus purchased an interest in her dam, B103, for \$50,000.

Phenotypically, she's a deep-bodied, well-structured female with a sound udder structure and nice teat placement. She has good maternal instincts and is doing a great job raising her first calf.

As good as she is, look at what's coming. Her son, F091, is a true outlier for combined calving ease, growth and marbling. A **RARE** individual whose EPDs and \$ Values are better than either parent.
